Fleet Management, Security & Communications

MONITORING

Satcom Technology provide an alarm monitoring and tracking platform to alarm receiving centre's (ARC's). This is used to track people, vehicles and other assets.

High value goods are tracked by the ARC to ensure that the goods get from A – B securely. All alerts are displayed on the software alert console along with a current map position and several pre-alarm positions.

The alert console window shows the instructions to follow in the event of an alarm along with the vehicle details. A full audit trail is automatically logged on each alarm event.

All alarms can be monitored by the ARC depending on your requirements.

PANIC

This is an alarm to notify the ARC if a driver pressed a personal panic alarm button

DOOR OPEN

This is an alarm to notify the ARC if a door on the vehicle was opened

ROUTE DEVIATION

This is an alarm to notify the ARC if a vehicle deviated from a set route

STOP EN ROUTE

This is an alarm to notify the ARC if a vehicle stopped along its set route

GEO-FENCE

This is an alarm to notify the ARC if a vehicle either entered or left a known geo-fence location.

REMOTE TRIGGERS

The ARC can also control remote actions which can trigger security features on each vehicle. Remote triggers can be used to immobilise or re-mobilise vehicles.
