

Whether it's service engineers, a fleet of cars, delivery vans, trucks or other fleet vehicles, the owners and managers of these mobile assets have a lot on their minds; Fuel costs, vehicle maintenance, insurance, driver payroll and overtime expenses are rising. Plus, the high capital cost of adding or replacing fleet rolling stock makes it imperative that all equipment be operated with maximum efficiency, safety and productivity.

Working with fleet connectivity partners like Garmin and Beacon Wireless Solutions, Satcom Technology provide the interactive navigation link that's been missing in fleet management systems.

Garmin PNDs, are installed in each vehicle, along with an in-vehicle data transponder.

ZOOM! is award winning technology that joins Garmin in-car navigation with advanced fleet tracking systems

Features include:

- Provides 24/7 tracking of your vehicles
- Send addresses directly to the navigation system
- Two-way text messaging with your drivers
- Comprehensive usage reports

How it works:

- A single cable connects the Garmin GPS unit directly to the Zoom!
- Zoom! connects the driver with dispatch via mobile communications network (GSM/GPRS)
- Secure website allows dispatch to monitor vehicles on the Internet from any PC, no special software is needed.

Communicate, Navigate & Monitor

- Garmin GPS unit is the messaging screen
- Two-way communication with dispatch for driver accuracy and security
- Instant re-routing with "new destination" message prompts
- Detailed color turn-by-turn street mapping comes preloaded
- Automatic routing & Turn-by-turn directions with Quick route recalculation
- Entire next day itinerary/route sent directly to vehicle from any PC
- Know where your vehicles are 24/7
- Monitor vehicle speeds to encourage responsible driving
- Downloadable custom reports for analysing vehicle performance and maintenance scheduling
